To whom it may concern

This is my personal recommendation letter for Dr. Julien Beaudaux with whom I worked at Research Laboratory at IJJ Innovation Institute Inc in 2013. We were working on a privacy enhanced distributed information storage theory, its real system design, and a prototype implementation. Dr. Beaudaux contributed to the project with his deep knowledge of privacy and sensor networking technology related to medical care area that would be one of the best applications for our core technology. Dr. Beaudaux worked on designing and building an automated performance measurement system of the distributed storage. His outcome was adopted in our project and used as a base measurement system to evaluate our storage nodes distributed worldwide. Dr. Beaudaux also had high level experience and knowledge of computer operating systems, computer languages, scripting languages, as well as information theory and distributed systems which were great help to move our project one step forward. At the end of his stay in our laboratory, Dr. Beaudaux proposed a new application and project plan utilizing the privacy enhanced storage system as a core system of distributed medical sensing system for future health care area, and had a lecture at our company-wide seminar that attracted many technicians and sales engineers in our company.

Dr. Beaudaux is an excellent independent researcher with high level engineering skills, supported by his deep knowledge of information science, networking, and privacy topics. I believe he can fit for both academic and industrial positions and will provide fine addition to your organization.

Sincerely yours,

Keiichi Shima
