Dear Sir or Madam,

Resolutely oriented toward a career in the Research & Development area, I would like to draw your attention on my application for a position of Embedded Software engineer in your company. Being an tech enthusiast, I would be very pleased for the opportunity to join your team.

Throughout my work history, I learned to handle technical and organisational aspects of innovative projects, from their initiation through implementation to industrialisation. Such experiences provided me with a variety of knowledge and practical skills in software engineering, primarily in embedded systems development (C/C++, Real-Time OSs, Linux) as well as desktop and mobile applications (python, bash scripting, Ionic).

Currently responsible for the software of a new class C medical device, I have been actively involved in management and quality control aspects as well. In this context, I have earned experience in procedures compliance, documentation, continuous integration and agile team management.

Finally, I consider myself to be an open-minded, driven and eager-to-learn worker. My various international experiences and collaborations lead me to believe that I can swiftly blend in almost any environment.

I have attached my current resume for your consideration and would welcome the opportunity to discuss my background in greater detail.

Thank you for taking the time to review my application. I look forward to hearing from you.

Respectfully yours

Julien Beaudaux
